Summary

I am a final-year Engineering student seeking entry-level roles in Software Engineering and allied fields. I possess experience in *communication*, *collaboration* and *adaptability*-oriented roles through numerous volunteer works with Wikipedia and freelance blogs. Focused on strengthening my fundamentals, i am willing to adapt to different roles by leveraging my curiosity and vigour.

Experience

Kashiv BioSciences LLC

February 2026–April 2026

Software Developer Intern

Maintenance and Testing:

- Applied responsive web development principles to update and optimise the internal resource site
- Performed rigorous testing to ensure web-based IT tools functioned correctly on different platforms

Database Management:

- Performed routine data cleaning and validation checks in the departmental database to prevent duplicate entries and maintain data quality
- Assisted in basic administration of a SQL-based inventory tracking system

Projects

Automated Bulk Email Pipeline

- Used `smtplib` and `email.mime` libraries automate the delivery of bulk, personalised HTML emails, reinforced with basic fault-tolerance
- Parsed structured contact data from CSV files and utilized Python's `string.template` to inject variables, eliminating manual data entry.
- Implemented algorithmic rate-limiting (`time.sleep`) and `try/except` error-handling protocols to successfully bypass standard spam filters and prevent script crashes during network timeouts.

E-Commerce Web Data Scraper

- Architected a modular, production-grade scraper across 6 separated concerns (fetching, parsing, storage, config, logging, tests) following professional software engineering conventions
- Implemented automatic pagination to traverse multi-page catalogues and exponential backoff retry logic via `tenacity` to handle network failures gracefully
- Built dual storage pipeline persisting scraped data to both structured CSV and a timestamped SQLite database for queryable, scalable record-keeping
- Wrote a `pytest` unit test suite covering valid parsing, malformed product handling, missing fields, and pagination edge cases
- Applied randomised User-Agent rotation and rate limiting with jitter to reduce bot detection and respect server load

Education

JSSATE, Noida

Computer Science Engineering

Bachelor of Technology

2022-2026
